

Class 10 Chemistry

ICSE and CBSE Board Syllabus

ICSE Syllabus

Theme 1: Periodic Properties and Chemical Periodicity

- Periodic properties and trends in groups and periods.
- Atomic number basis of periodicity and relation with valence electrons.

Theme 2: Chemical Bonding

- Electrovalent, covalent and coordinate bonding.
- Electron dot structures and properties of compounds formed.

Theme 3: Acids, Bases and Salts

- Definitions, indicators, pH basics, neutralisation and preparation / properties of salts.

Theme 4: Analytical Chemistry

- Action of heat, reagents and observations used for identification of salts / gases at school level.

Theme 5: Mole Concept and Stoichiometry

- Relative atomic/molecular mass, mole, molar volume, balancing and numerical problems.

Theme 6: Electrolysis

- Electrolytes and non-electrolytes, electrolysis of acidified water / copper sulphate etc., applications.

Theme 7: Metallurgy

- Occurrence of metals, concentration of ores, extraction and refining, alloy basics.

Theme 8: Study of Compounds

- Hydrogen chloride, ammonia, nitric acid, sulphuric acid — laboratory preparation, properties, uses.

Theme 9: Organic Chemistry

- Introduction to organic compounds, homologous series, alkanes / alkenes / alkynes basics, functional groups, simple conversions.

CBSE Syllabus

Unit 1: Chemical Reactions and Equations

- Writing and balancing equations; combination, decomposition, displacement, double displacement, redox, exothermic/endothermic reactions.

Unit 2: Acids, Bases and Salts

- Properties, reactions, pH, importance of pH, common salts and their uses.

Unit 3: Metals and Non-metals

- Physical and chemical properties, reactivity series, ionic compounds, corrosion and prevention.

Unit 4: Carbon and Its Compounds

- Covalent bonding in carbon, homologous series, nomenclature basics, ethanol / ethanoic acid, soaps and detergents.

Unit 5: Periodic Classification of Elements

- Modern periodic table, trends in valency, atomic size, metallic and non-metallic character.
